

HB 6709, a Right to Try Experimental Drugs for Terminally Ill Patients

Someday I too may need to try experimental drugs for I have emphysema to which there is no cure.

Please make it possible for people to be able to try and help themselves instead of just waiting for matters to get worse.

Until you are in a helpless and hopeless situation you will not and never will understand what it feels like to not to be able to live your life as a healthy normal person, to see what you used to take for granted disappear.

It is very discouraging and depressing as you are able to do less and less and need to rely more and more on other people.

Please let terminally ill people be able to make the choice to use experimental drugs! This single ray of hope can be a life saver.

Sincerely,

Sandi Isner
