I am a patient of a naturopathic doctor. I strongly believe in and like the naturopathic medical approach and would like my ND, and others NDs, to have medication prescriptive authority consistent with their current training. It has come to my attention that in other states NDs have prescriptive authority for many years. Why not in CT? After all NDs are trained to prescribe medications.

I feel that I would be better served if I was able to receive many more primary care services from my ND. It will also save me time and money as I have a very hectic and busy schedule as we all do.

So, I ask you to support the scope of pPractice for NDs in Ct by providing them with the authority to prescribe medications to their patients. Thank you.
