

Dear Energy and Technology Committee members,

I realize that this may be too late for the bill that was being introduced to committee, but hoping that CT made the smart decision to go forward with financing projects of solar share. At this time, most of the renewable energy that we are able to purchase comes from Texas and other places far away. This is not the contribution that we should be making towards a sustainable planet and state. We are an intelligent state, so should be in alignment with our smart and progressive neighbor that is forward thinking for this country and planet. Besides playing our part as responsible citizens, it makes economic sense to be using a predictable and bountiful source, such as the sun, and creating jobs that will sustain our communities.

I urge you to act intelligently and support HB 5427.

Sincerely,  
Christina Brown  
Avon, CT
