

I am writing to share my concern about the proposed legislation regarding shared solar energy. Two current bills before the legislature do not go far enough to ensure that all Connecticut residents can benefit from solar power generation. I live in a condo and cannot have solar panels installed; but I would like to take advantage of shared solar power generation in the state. Please support a full shared energy policy on par with what is being done in the state of Massachusetts. We need to expand green energy to all.
