I'm a resident of west Hartford and a customer of the MDC. I'm supporting this bill concerning water sales from the public water company to commercial users, that export the water out of state. I feel this bill helps to ensure the supply of water to the public of connecticut, for which this utility is intended. Charging the commercial users the same price as the intended users is truly the fairest policy. If selling as much water as possible is the goal to increase revenue, then charging the high use, exporting companies the same higher rate makes financial sense.

From what I understand, the MDC will need more money for ensuring proper upkeep of all the processes to provide clean water. This is a perfect way to obtain more money. The amount of water used by each costumer of the MDC has gone down, due to conservation motivated by to increased prices.

Probably the most important part of this bill is also charging those companies that export water, the higher rate for sewer services. Those companies will generate large quantities of sewage. That sewage burden will be quite large. Those companies should pay the higher rate, so that we can properly dispose of all that waste in our environment. I'm also concerned with how much plastic will be in that sewage.

Please pass this Bill SB 422! This is a bill that looks after the people of connecticut!

Thank you,  
Nancy OLeary
