

To Whom it May Concern:

I do NOT want my family, especially my young children, exposed to a toxic chemical that is actually industrial waste from the fertilizer and aluminum industries who sell it to municipal water providers.

Hydrofluorosilicic acid is NOT the same as pharmaceutical grade sodium fluoride as found in toothpaste.

It is disgraceful that a toxic substance is pushed on trusting citizens as a public health measure, even though it is impossible to provide individualized dosages.

Thousands of young people now have white spots on their teeth from an overdose of fluoride. Just imagine the negative effects on their growing bones that we cannot see.

It is illegal for governments to add drugs to the water supply, regardless of perceived or imaginary health benefits, so why is it allowed with fluoride?

I am totally against water fluoridation.

Sincerely,

Peter McCrea
