

I am opposed to SB 300. I think it is a bad idea to allow private companies access on land that drains to the public water supply. This weakens the protections for our drinking water. The effects of climate change over the long term are unknown. We should protect our water supply from possible degradation in the future. In addition the state is preparing a statewide water plan, we should wait for that before making any commitments to allow commercial use of this land.

Thank you,
