

Environment committee members

I had only learned in recent years that state land could be taken over for things such as firing ranges, housing, logging etc. That is against the spirit of what the land was put aside for. Most recently it is the state firing ranges that are being proposed all over the place with local opposition. A constitutional amendment would fill the objectives of the whole state forest system. It seems that even though there are major hurdles ahead, that starting this process now and educating the public about what is going on, will be very useful. Please approve and pass this proposal on.
