To whom it may concern -

With all of the concerns about GMO foods, I think our citizens have a right to know what is in the food they eat. Many parts of the world are already banning GMO foods and yet in this country, we don't even know if the food we eat contains GMO products.

I support HB 5300, which will remove the trigger clause from CT's current GMO labeling law. I want to know what's in my food and the food my family eats.

Thank you,
