

Testimony for HB6329, An Act Concerning Hydraulic Fracturing in CT

Dear Senator Kennedy, Senator Minor, Representative Demicco and members of the Environment Committee,

Please protect our property values and our town budgets from costly remediation expenses, while also keeping radioactive and chemical contamination present in fracking waste from coming into our state. Unless HB6329 is passed DEEP will write regulations which would allow for the importation of fracking waste into Connecticut. Instead there must be a permanent ban on this waste to prevent contamination that could occur from inadequate testing and treatment of waste, spills, accidents and leaks.

Thank you for your support.
