

Re: HB 6329 An Act Concerning Hydraulic Fracturing Waste in Connecticut

I urge you to support HB 6329. The waste products of hydraulic fracturing have been proven to contain toxic, radioactive properties that threaten to contaminate our environment, whether accidentally spilled or treated and then released for reuse. While we are fortunate here in Connecticut not to have hydraulic fracturing within our borders, the admission of fracturing waste would put us in significant and potentially irreversible health and environmental danger.

Rather than depending on DEEP to establish regulations to control the potentially disastrous presence of waste products, our health and environmental interests will best be served by an outright ban of the substances from entering our borders.
