

RE: Bill #6329 An Act Concerning Hydraulic Fracturing Waste in CT

From: Bonnie Karkowski, 1852 Poquonock Ave, Windsor, CT

To Members of the Environmental Committee and the State Legislature:

I urge the passage of Bill #6329 as it will protect the health of CT citizens by protecting our air, water, and soil from contaminants inherent in the hydraulic fracturing process and its products.

With the present attitude at the Federal level toward protective environmental regulations, it has become imperative that individual states do all things possible to protect the environment within their states. The water that flows, the rain that falls, and the winds that blow through our state - all may carry pollutants from other states. By passing this bill, Connecticut sets an example that may well encourage neighboring states to do the same.

Thank you.
