

A permanent ban is needed(PHB 6329) ban on all oil and gas drilling and extractions wastes.The near-by states that have these industries NY and Pennsylvania have an excessive over flow(non-sustainable) amount of contaminated waste water and are looking for somewhere to dump it. Typically they will look for towns that are ignorant and desperate. These wastes are highly dangerous to life. The industry has down played the risks for profit. Multiple studies prove the risks are real. The wastes contain toxic elements that are radioactive and do cause multiple types of cancer, birth defects, developmental problems, neurological and multiple organ damage. Spills and leaks have permanently poisoned aquifers and run-off into surface waters and property in other states. Thank you for your help to save our water here in CT.
