

I urge you to support HB 6329, a permanent ban on fracking waste in CT. Our state is small in area and our population large, making maintaining a healthy and whole environment crucial to the millions of residents of our state.

Let Connecticut be a leader in modeling sustainable practices across the board. HB 6329 is an essential step toward the promise of a future to believe in, one grounded in integrity and the greater good. It is on the state level that we can redirect the current federal misguidance regarding environmental well-being. Let's move forward with this critical mission to maintain the health of our beautiful state.
