

Hi,

We're strongly opposed to bringing fracking waste into Connecticut and SUPPORT HB 6329. Bringing this dangerous waste to Connecticut for disposal, via thousands of additional tanker trucks on our roadways, poses the risk of accidents, spills, and contamination of private and public lands, drinking and surface waters, and costly repairs to road and publicly-owned treatment systems. Connecticut is one of the smallest and most densely populated states in the nation, and this activity would threaten resident health and risk land and water resources and property values forever.

Thank you.

Chris Schweitzer
