

HB 6329 An Act concerning hydraulic fracturing waste in Connecticut

Susanna M. Thomas

7 C Sycamore Drive

Storrs, CT 06268

Connecticut must ban the importation of toxic , radioactive fracking waste. The material used to extract gas by fracking contains chemicals that cause serious health problems to our citizens when it leaks into our water supply. The waste when spread on roads, parking lots or playgrounds will be a hazard as it leaks into nearby streams in our neighborhoods. When this hazardous material is transported by truck from other states the risk of spills and accidents increases our danger.

Connecticut should be looking forward to increased production of energy by wind, sun and water, weaning us from the use of fossil fuels. Our state could become a leader in new technologies that will improve our environment while it provides more jobs.
