

Senator Miner, Senator Kennedy, Representative Demicco and members of the committee:

I urge you to enact a permanent ban on the storage and processing and use of any products of fracking. These waste products contain toxic chemicals often include radium 226 that has a half-life of over a thousand years. We don't want trucks carrying this waste through our state either, exposing the general public and also police officers to such potential hazards. Leaks in storage tanks would threaten our waters. There is no need for us to take this gamble with the health and safety of Connecticut's citizens.

Thanks you very much,

Susannah Wood
