

I am writing to you, as my legislator, to ask that you SUPPORT SB 630 to keep our commitment to renewable standards and to showing the way forward...

and to ask you to OPPOSE SB 106, which will undercut that mission, at a critical, sink or swim turning point, only to accommodate an industry which has run its course and needs to die gracefully. Fukushima has shown us the pitfalls of nuclear. Considering that solar and wind are environmentally harmless, and nuclear is unstable, and potentially environmentally apocalyptic... it is hard, as your constituent, to see any choice.

At this critical time it is important for the states to lead the way.

Thank you,

Barbara Broughel
