

Hello!

As an energy task force for more than a decade, I will agree that it has been a hard road to add renewable energy into our mix. We all know it's the right thing to do, the clean thing to do to create a healthful future. The successes are inspiring. Solar, thanks in part to the Solarize program and the Green Bank has provided many jobs, many savings and lowered our emissions rates. The upcoming generation is fully informed as to how clean energy and environmental conservation will ensure their future. I fully endorse legislation to continue this trend. Please extend our targets to 80% by 2040 and direct more funds toward Clean Energy Investment.
