

2/5/17

To whom it may concern,

In the light of the past few weeks, with our current president's administration pushing "alternative facts," such as the insane notion that climate change is not real, it is more imperative than ever that our state of Connecticut and local leaders stand up to protect our environment by strengthening our ability to produce clean energy.

As an extremely concerned citizen, one who wishes to protect our air, water and land from unnecessary pollution, I beg you to please support SB 630, to strengthen and extend Connecticut's Renewable Portfolio Standard (RPS), which requires utilities to get a gradually-increasing percentage of energy from renewable sources, beyond 2020.

I also ask you to please oppose SB 106, which would undercut our rapidly growing solar and wind industries by potentially allowing nuclear power to co-opt their incentives. We need this vitally important clean energy source more than ever! I ask you to to strengthen the requirements for more renewables because it is critical to our family's health and Connecticut's economy.

Respectfully,

Kimberly Gilbert
