

Please support SB 630, to strengthen Connecticut's Renewable energy Portfolio Standard. The targets should be extended to 2050 and there should be interim targets between now and then. Connecticut should shoot for a rapid increase in wind and solar (or other renewable) resources so that we get at least 50% of our energy through renewables by 2030. Connecticut Alternative Compliance Payments (ACP) are the lowest in this region which encourages electric suppliers to sell renewable energy elsewhere instead of to Connecticut. The CT ACPs should be increased (and ideally a standard ACP should be developed across the region). ACP fines should be allocated to growth in clean energy programs that create jobs and increase renewable energy use.

Please oppose SB 106. This bill would provide unwarranted aid to nuclear power while reducing support for clean businesses, jobs, and ultimately safe energy production.

Sincerely,

Royal Graves
