

Hello,

I am Susan Miller, from Windsor, CT. I am a member of 350CT legislative committee. I have some comments regarding S.B. 630 and 106.

Regarding SB630:

Please support SB630 to strengthen and extend Connecticut's Renewable Portfolio Standard. I am VERY concerned about global warming and we must go above & beyond to address this climate emergency. I purchased solar panels two years ago to try to help with this, but much more needs to be done at the state level. The RPS must be extended to 2050 and Connecticut should get at least HALF of its energy from renewable sources by 2030. I have children and I want to be sure their state is fully behind a clean environment.

Regarding SB 106:

Please oppose SB 106. Our growing solar & wind industries need to be strengthened, not undercut by nuclear power. Fines must be directed to programs that have a proven track record of creating jobs and growth in renewables, while reducing CO2 emissions. The fines imposed on utilities that do not comply with the RPS are the lowest in the region. That hurts Connecticut consumers. Increase the fines to make sure utilities follow the law.

I want to see Connecticut, my home, be a leader in the region for clean, renewable energy. Vermont has already shown that this can be done. For the health of all of us, especially our children & grandchildren, make sure that we are doing every possible thing to shift to safe renewable energy.

Thank you,

Susan Miller
