Representative Jonathan Steinberg
Senator Heather Bpond Somers
Senator Terry Gerratana
Chairmen, Public Health Committee

Dear Representative Syeinberg and Senators Somers and Gerratana:

Please support Bill 7221 because it provides information essential to the ongoing water planning process. In order to plan on future water use in the state and to provide adequate clean water for Connecticut residents, the two water planning groups and members of the public who chose to have input into the planning process need to know how much water is available to water companies, where the water is located, its quality and how much water can be transferred to another locations without jeopardizing current or future supply.

No resource is more essential than clean water, although its monetary value is underestimated.. The people of Connecticut do not have the protection of a scientifically-based water supply plan We must rely on you to provide ready access to the information critical to such a plan for the sake of water security. For these reasons, I ask you to pass Bill 7221.

Sincerely,

Sally Rieger
