

As a resident of South Windsor, I support HB 7221.

Currently, water utilities (and only water utilities) have held unique legal rights and privileges to withhold vital information from the public. A request for water company information may take many months to be honored, and then the delivered document can be dramatically redacted, render it nearly useless.

I support the right of the public to know, prior to decisions being made, what water companies are planning to do with the water supplies under their control.

Sincerely,

Ellen Castaldini
