

Dear Legislators,

I am writing in support of HB 7221: Acc SS to Water Planning Information

Astute minds created the Act concerning access to water planning. In 2017 we not only have to combat terrorism but DROUGHT as well, both in its pattern and severity. As of yet, Water is the only resource that can nourish man, animal, plants and crops. It is also vital in management of hygiene for disease control in personal and city situations. Information would have to be made available, not redacted, for persons/groups to plan for water uses during various DROUGHT times of year t various DROUGHT locations. Conservation, reuses of grey water can be created, expanded based on this information, assuring best use/ location practices for all. Quality would be assured, quantity would be protected.

Sincerely,

M.Hope Fish
