

To whom a it may concern

I support a carbon fee and dividend I Connecticut and hopefully nationally for many reasons. First, global warming is a fact. It's already contributing to numerous problems including melting of the ice caps which leads to sea level rise threatening numerous areas close to the water with flooding. In addition the warmer oceans interfere with the healthy habitats in the ocean disrupting coral reefs. Rising temperatures fuel longer and hotter heat waves more frequent droughts more powerful hurricanes as the earth's oceans rise in temperature.
