

Testimony for Senate Bill 103 “an Act Concerning Hydraulic Fracturing Waste In CT”

I stand in opposition to Ct accepting any fracturing waste products as long as the gas and oil industry is exempt from the Clean Water Act and refuse to disclose the chemical composition of their waste. How are we to properly dispose of a produce when we do not know what is in it?

In addition, clean water is our most precious resource. Without it our homes have no value and every municipality and industry will bear enormous costs to provide the water they need.

My town, Ashford has passed an ordinance prohibiting fracking waste in the town, as have many other towns. This is clear evidence that the people of CT do not want fracking waste in our state.

I urge you to pass a permanent ban of this dangerous product.

Thank you,

Janet Bellamy
