Connecticut State Legislature
Environmental Committee

Subject: Senate Bill 103 "An Act Concerning Hydraulic Fracturing Waste in CT

Dear Environment Committee,

I strongly support a ban on Fracking waste being shipped into or being processed or disposed of in Connecticut. It is hazardous material of often unknown contents which when spilled or pumped into ground or other wised handled could contaminate our ground water (it has done so in other states). The large cost of attempted cleanup would fall on the state after the waste companies went bankrupt. We were lucky to have GE with large resources to partially clean up PCB but the drilling companies and waste companies are usually much smaller with less accessible funds.

Sincerely,
Robert Dickinson
