

Dear Honorable Senator Miner, Senator Kennedy, Representative Demicco and distinguished members of the committee,

I'm very concerned with the issue of fracking in general and would like to address fracking waste specifically here in Connecticut. I'm asking that you please permanently ban this toxic, radioactive fracking waste in our state of CT. Our environment, health, property values, town and state budgets cannot afford the accidents, spills, leaks, and inadequate treatment followed by discharge that are contaminating other states. There are thousands of spills in other states with regulations and waterways are already radioactive. We need to ban this waste in CT so we don't face the same contamination problems here. Thank you very much for your attention to this matter.

Sincerely,
Lori Guillard
