

I wanted to let you know of my support for SB 103, a ban on fracking waste products in CT. Our state should be proactive in protecting the health of our residents. Fracking waste has no place on our roads, in our soil, or in our water. The cost of chemical remediation is astronomically high and a burden we do not want to potentially subject our state or towns to. It is much cheaper and easier to prevent a fracking waste contamination than to clean one up. Greenwich is a great example of the onerous cost of remediating a hazardous spill event. Help protect our state with a comprehensive ban on the books!

Thank You,

Stephanie Montminy
