

Honorable Senator Miner, Senator Kennedy, Representative Demicco and distinguished members of the Environment Committee:

I am writing to urge your support for a ban on allowing hydraulic fracturing waste in our beautiful state. We cannot leave a legacy of toxic waste for our children and future generations. Fracking in and of itself is a questionable practice in an age where continued reliance on fossil fuels is threatening our globe. To further the insult by importing its waste products is an assault on the good people of Connecticut.

Please vote to support Senate Bill 103 "An Act Concerning Hydraulic Fracturing Waste in CT"

We must permanently ban toxic, radioactive fracking waste in CT. Our environment, health, property values, town and state budgets cannot afford the accidents, spills, leaks and inadequate treatment followed by discharge that are contaminating other states. There are thousands of spills in other states with regulations and waterways are already radioactive. We need to ban this waste in CT so we don't face the same contamination problems here.

I urge you to honor the planet and our beautiful piece of it that is Connecticut.

Sincerely,
Patricia Sisson
