

Please pass Senate Bill 7 and an improved version of Senate Bill 9, so we can make progress in reducing pollution, protecting our health, increasing jobs, and saving money!

I have a lung condition and want clean air - for myself and my grandchildren and all.

I also am very concerned that spring has officially arrived 20 days early - the Arctic is thawing mid-wiinter. I see early blooming, which I like, but am scared about what it means for the earth's creatures - birds, fish, animals and humans.

Connecticut must be in the forefront of climate change, since Trump has taken us out of the Paris agreement.

Connecticut must do something to protect the people in our state, and to set a smart, positive,example.

Thank you,
Janet Luongo
