

Dear Members of the Energy and Technology Committee:

I am submitting this testimony concerning Proposed S.B. No. 9, An Act Concerning Connecticut's Energy Future.

I support the provision in this bill that would require Connecticut to update and extend its Renewable Portfolio Standard (RPS), but I strongly oppose the provision that would eliminate net metering for residential solar customers.

Renewable Portfolio Standard

I urge the committee to support an expansion of the RPS to at least 40% by 2030.

- Connecticut's RPS currently does not set any increase in standards beyond 2020, and the 2020 standard is not as aggressive as that of neighboring states, including New York, Rhode Island, and Vermont.
- The proposed expansion of the RPS to 40% by 2030 is the minimum required to meet the emissions reduction goal recommended by the Governor's Council on Climate Change.
- Connecticut has made strong commitments to reducing greenhouse gas emissions to combat climate change, and achieving those goals will require a transition to a clean energy economy that relies primarily on electricity generated from renewable sources.
- Compliance with a higher RPS will also reduce emissions of harmful pollutants like nitrogen oxides, sulfur dioxide, and mercury, and provide substantial health benefits for Connecticut residents.
- The RPS is also good for Connecticut's economic growth. The RPS helps drive investments in renewables by guaranteeing that there is a market for that energy and by helping those renewables become more competitive with fossil fuel-based energy that currently has a market advantage.
- According to a January 2017 report by U.S. Department of Energy, there are nearly 37,000 energy efficiency and solar jobs in Connecticut. Continued expansion of renewables in Connecticut will mean more employment opportunities and economic growth.

Net Metering

I strongly oppose the proposed elimination of net metering for residential solar customers, and I urge the committee to reject this aspect of SB 9. Eliminating net metering will end a major incentive for home owners and small businesses to convert to solar power and make it much more difficult for Connecticut to achieve its increased RPS standard for reducing greenhouse gas emissions. As owner of a home with solar panels, I wish to see many more home owners convert to solar power and reduce climate changing gas emissions from electrical plants.

Respectfully submitted,
