

I am in favor of this bill I suffer from wasting syndrome and my daughters mother has progressive multiple sclerosis both of us are in are 20s I believe that we should be able to grow our own medicine considering that there are thousands of strains of cannabis that have different effects and can treat many different conditions also if you are disabled that it may be very hard if not impossible to be able to afford purchasing your medication if u can at all. CT is one of the few states that at this moment u cannot produce your own medication even being a medical patient that needs to change. I also believe that it should be recreational and that it is by far less dangerous than alcohol and any persons over 21 should be able to purchase grow and use at their discretion. I have been waiting many years for this and fully believe that it will benefit all of CT residents and bring in much needed revenue to the state of Connecticut.
