

To the Environmental Committee

The evidence is very clear that fracking and the radioactive, toxic waste it produces are harmful to plant, animal and human life. I urge you to evaluate the short and long-term consequences of this misguided practice. Once fracking operations have disrupted and polluted the deep ground and topsoil, our streams and rivers spread the toxic waste downstream in all directions.

Please, take action to demonstrate your environmental stewardship. Impose a permanent ban on fracking and the storage of fracking waste. Step up at this critical time to protect our environment and our health. Connecticut families are counting on you!

Sincerely,

Marilyn Allan
