

Clean Energy Task Forces & Commissions Across the State:

To the: Honorable Senator Miner, Senator Kennedy, Representative Demicco and distinguished members of the committee.

Please permanently ban toxic, radioactive fracking waste in CT. Our environment, health, property values, town and state budgets cannot afford the accidents, spills, leaks and inadequate treatment followed by discharge. "We the people" have a right to live and work in an environment that is free of contaminants that have been generated by the process of fracking for gas and oil. Other states have been contaminated by spills and accidents. We need to ban this waste in CT so we don't face the same contamination problems here.

Ordinances have been passed in over thirty towns throughout the state. This is for the common good, an ideal that has certainly been forgotten in this day and age.

We the people. .... Not we the gas, coal and oil corporations. They lied about the dangers of fossil fuels. These very same companies have taken over and destroyed lands of indigenous people around the world, just to increase their profit. They fill their pockets. The collateral damage that has been unleashed over the years is readily apparent. Their greed has no respect for the common good.

Please incorporate at the least the wording of fracking ban ordinances that have passed in over thirty Connecticut towns.
