Honorable Senator Kennedy, Senator Miner, Representative Demicco and distinguished members of the Environment Committee,

We are submitting this testimony in support of Senate Bill 103 "An Act Concerning Hydraulic Fracturing Waste in CT". We urge you to permanently ban all toxic radioactive fracking waste in CT.

We have seen the devastating environmental and health problems that result from toxic radioactive fracking waste in other states. Ultimately, people suffer as their health deteriorates and their property values plummet. Spills and leaks of fracking wastes into waterways continue to occur even in states with

regulations. Those companies responsible never fully complete the clean up and end up leaving it to the citizens and state legislators to find the funds to repair their environment, which takes decades.

Please don't allow CT to be put in the precarious position of becoming the next victim of contamination from toxic radioactive fracking wastes and support S.B. 103 unanimously.

Thanks you for your consideration.

Respectfully,

Paula Bacolini &
Steven Winter
