

RE: Senate Bill 103

To the Honorable Senator Miner, Senator Kennedy, Representative Demicco and distinguished members of the committee,

I urge you to permanently ban toxic radioactive fracking waste in CT.

Please protect the wonderful and priceless natural resources we depend on here in CT, which we sometimes take for granted- clean water and clean air. Protect our public health and protect our property values. Ensure we can lead safe, healthy and productive lives here in CT by banning fracking waste.

State and municipal governments cannot afford the clean-up costs associated with fracking waste with its well documented record of spills, leaks and other 'accidents' nor the cost of the many illnesses associated with exposure to the fracking waste.

Important to note, treatment of this toxic waste as it is currently practiced is followed by discharges of materials that are still highly toxic -at levels known to cause cancer.

Our health is our wealth. Please protect citizens young and old here in the great State of Connecticut and ban fracking waste.

Thank you,

Elizabeth Y Craig
46 Cheese Spring Rd
Wilton, CT 06897

Future regulations=Future permits...tank farms, transfer sites, partially treated and discharged waste, tanker trucks and possibly new rules to spread fracking brine on roads or mix fracking waste solids into construction fill. This impacts all CT communities
