

Dear Honorable Senators, Representatives and Distinguished Members of the Committee:

Please pass bill 103 and permanently ban toxic, radioactive fracking waste in CT. Our environment, health, property values, town and state budgets cannot afford the accidents, spills, leaks and inadequate treatment followed by discharge that are contaminating other states. There are thousands of spills in other states with regulations where, nevertheless, waterways are radioactive due to leaks and other factors. We need to ban – not just regulate - this waste in CT so we don't face the same contamination problems here. Turning water into toxic waste is a crime against humanity and nature.

For the sake of the health of Connecticut's citizens and wildlife, I urge you to pass Senate Bill 103, and ban fracking waste. Thank you.

Respectfully submitted,

Maureen Heidtmann
