

I am writing to urge you to please permanently ban toxic, radioactive fracking waste in our beautiful state. Our environment, our health, our property values, and the town and state budgets, cannot afford the accidents, spills, leaks and inadequate treatment followed by discharge that are contaminating other states.

A very quick google search uncovers report after report of fracking failures in other states. THOUSANDS of spills and violations occurring in other states in violation of laws and regulations. Let's not add Connecticut to the growing list of states whose environments and people have been harmed by fracking
Please ban this waste in Connecticut so we don't face the same contamination problems here.

Thank you.
