

Senate Bill 103 "An Act Concerning Hydraulic Fracturing Waste in CT" Testimony

Dear Senate Environment Committee,

We urge you to enact a permanent ban on the admittance of fracked waste materials of any kind to Connecticut. We firmly believe that the transport, processing and final disposal of end materials present too many opportunities for leakage, spills and any other events that can contaminate our soil, water bodies and eventually our residents. In the end, there are no safety procedures that can ever guarantee clean processes for these toxic materials. We treasure our people and environment much, much more than the possible profits of any such ventures.

Respectfully submitted,

David and Marjorie Schneider
