

Senator Miner, Senator Kennedy, Representative Demicco and members of the committee,

I wanted to voice my concern and request for your support of the health of CT's residents and environment. Please permanently ban toxic, radioactive fracking waste in CT, so we don't have the same contamination problems here as other states do, considering the thousands of spills that occur there. So many of their waterways are already radioactive..

Our environment, health, property values, town and state budgets cannot afford the accidents, spills, leaks and inadequate treatment that are contaminating other states. The banning, should include protection from tank farms, transfer sites, partially treated and discharged waste, tanker trucks and the spread of fracking brine on roads or the mixing of fracking waste solids into construction fill.

Thank you so much for doing the right thing for us all,

(I could not figure out how to make this an attachment so please accept).

Susan Zeitler
