

To Whom It May concern:

I strongly agree with Bill SB 104 to prohibit the use of Automatic Misting Systems in Connecticut.

Automatic pesticide misting systems are detrimental to the public's health and the environment because the "mist" will spread pesticides directly onto nearby people and animals.

Critics will say a homeowner can do whatever they want on their property. But a mist will spread across boundaries and cause damage to neighbors. This damage also includes causing more "run off" from current acceptable lawn practices which allow pesticides to pollute our Rivers and Long Island Sound, which is owned and enjoyed by everyone. You should not have the right to endanger others or our precious natural resources just because you own a house or business.

Please pass bill SB 104
