

I made out a Living Will. My parents know of my wishes as I approach the end of my life. If I wished to die no Doctor or Nurse could legally help me do so. This would not be an action to be taken lightly, of course. Any pain would be addressed. If the individual is able to make that decision would be analyzed.

Passing HB 5417 would be merciful. A Doctor would make it possible that a person could end their life without pain. Now, often people fail and do far more damage.

Please consider my thoughts and concerns. This is very important to me, and many others.
