Medicaid in Connecticut

Provides health coverage for more than 1 in 5 Connecticut residents

Covers 4 of every 10 children born in-state

Among all children, 1 in 4 is enrolled

Primary source of funding for nursing home and community-based long-term services and supports

Largest source of federal funding

One of the largest shares of state spending

With the Children’s Health Insurance Program (aka Husky B), makes up “Husky Health”

Program Financing

Medicaid is funded jointly by the federal government and the states and overseen by the federal Centers for Medicare and Medicaid Services (CMS). Historically, anyone who meets the eligibility rules has a right to enroll in the program and states are guaranteed federal contributions toward their program expenditures.

Program Structure

Medicaid is a public health insurance program that provides coverage to low-income families and individuals. Each state operates its Medicaid program within federal guidelines. Federal law sets forth a minimum level of services to be provided to specified “mandatory” low-income populations. States have broad flexibility in designing and administering their programs, including deciding whether to cover additional optional groups and services. As a result, Medicaid eligibility and benefits vary widely from state to state.

States are required to describe their Medicaid programs and how they will be administered in formal state plans approved by CMS. Federal law authorizes states to experiment with new ways of structuring health care services by proposing waivers to deviate from federal requirements. As the administering agency, the Department of Social Services (DSS) must submit applications for waivers as well as any amendments to the state’s Medicaid plan to CMS for approval.

Per federal rule, parent/caretaker eligibility ends when youngest child turns 18 if not graduating before 19. Depending on living situation, applicants for HUSKY C may be able to disregard some of their earned and unearned income.

In some cases, applicants over the income limit with high monthly medical bills can also spend down their excess income, by deducting those medical expenses from their income.

Mandatory Services

All states’ Medicaid programs are required to cover certain mandatory services including hospital services; family planning; physician services; early and periodic screening, diagnostic, and treatment services (EPSDT, mainly for children); and transportation to medical care. Generally, there are no premiums or copayments for Medicaid participants in Connecticut.

“Equal Access” Provision

State Medicaid provider payments must be consistent with efficiency, economy, and quality of care and sufficient to enlist enough providers so that care and services are available under the plan to at least the extent that such care and services are available to the general population in the geographic area.

42 U.S.C. § 1396a(a)(30)(A)

State Budget Impact

As the state’s largest entitlement program, Medicaid is projected to cost the state $2.9 billion in FY 20, reflecting an average annual increase of 5.3% for the period FY 18 to FY 20. The increase is attributed to caseload growth and changes in federal reimbursement associated with the HUSKY D population. Despite projected growth in this area, per member per month costs have decreased each year for the period FY 12 to FY 15, ranging from -0.5% to -5.9%, based on the most up to date information available.
