My name is Anthony A. Luciano, MD, I am professor and vice Chair of Obstetrics and Gynecology at UConn Health. I specialize in Reproductive Endocrinology and Infertility, the specialty that takes care of women with reproductive problems from puberty to menopause and beyond. 40% of my patients are couples with infertility due to hormonal or organic problems, such as lack of ovulation, poor sperm count, or disease of the uterus, tubes or ovaries. Some of my patients do not have insurance coverage for their infertility services, and unless they can pay out of pocket they will not receive infertility care from private hospitals or private clinics. In my office and in our department at UConn Health, we provide such services to all who need them, regardless of whether or not they have “good” medical insurance coverage and regardless of whether or not they can afford it. As a University public hospital we not only teach students residents and fellows but also conduct clinical and basic research for new technologies and state of the art services in our specialty. Many of our current and former patients are our grateful infertile couples who successfully conceived children under our care after they had been denied services at private infertility clinics in our state.

Please support UConn Health and its mission to serve our students and all of our Connecticut citizens with cutting edge medical care focusing on our citizens’ needs rather than on their ability to pay, which is very likely not to happen if we “partner” with a private enterprise.
