

To Whom It May Concern:

Please oppose HB 7005. It is legislative creep to lead to stripping our state of all religious exemptions as seen in the AAP's public testimony. Why are we wasting precious time and money on revising a system that is working? The CT vaccination rate is 98.7%. There is no real outbreak. It is a religious right, founded on the constitution, to decide whether following a recommended vaccine schedule fits into our religious beliefs. What next? The government wants to decide what cancer drug that we have to take or we will be jailed or our kids would be taken from us? Please consider the ramifications of making something mandatory and stripping Americans of their constitutional rights. It is hard to believe in this day an age of the theme of acceptance of all religions and all walks of life that the government wants to single out a small minority of people and persecute them for their religious beliefs.
