

My nephew got autism immediately after being vaccinated. The cost to the parents and the state is enormous. People need protection that do not believe in them.

Here's why:

The amount paid out for vaccine injury to date is over **\$4bn dollars**, and the burden is on us. The pharmaceutical industry is completely protected.

<https://childrenshealthdefense.org/news/4-billion-and-growing-u-s-payouts-for-vaccine-injuries-and-deaths-keep-climbing/>

Synergistic effects of vaccines have NEVER been studied. The formaldehyde, thimerosal, aluminum, etc, do not pass through the liver and instead go into the bloodstream where it can effect the brain directly. There is NO protective barrier.

If you are at all immune compromised and don't yet know it, you are going to take a hit. Dr Nemechek, an autism specialist knows this by experience with autistic children.

In 1940 children only got 4 shots, DTP and Smallpox.

In 1980 children got 16 shots and NEVER more than 2 shots per visit

In 2012 children got 49 doses of 14 vaccines by the age of 6

AUTISM Numbers

1970: 1 in 10,000

1975: 1 in 5,000

1985: 1 in 2,500

1995: 1 in 500

2001: 1 in 250

2007: 1 in 150

2009: 1 in 166

2012: 1 in 88

2014: 1 in 50

How sure are you that vaccines don't cause autism or brain dysfunction when they haven't been fully tested in mass dosing?

Vaccine Fact Summary

1. In 2011, the U.S. Supreme Court ruled that vaccines are "unavoidably unsafe." *Bruesewitz v. Wyeth LLC*, 131 S. Ct. 1068, 179 L.Ed.2d 1 (2011).¹

2. National Vaccine Injury Compensation Program (NVICP) vaccine injury and death payouts² :
a. Total to date (1989-2015): \$ 3.1 Billion
b. Average annual payout 2005-2009: \$ 75,630,051 per year
c. Average annual payout 2010-2014: \$221,822,386 per year
d. Cases pending: 1,943

3. There is vast underreporting of vaccine adverse events. FDA: As few as 1% of serious adverse reactions are reported.³ CDC: Only about 10% are reported.⁴ Congress: Has heard testimony

that medical students are told not to report suspected adverse events, 5 despite federal law requiring doctors to report suspected adverse events.⁶ National Vaccine Information Center (NVIC) survey: 1 out of 40 doctor's offices (2.5%) in New York report a death or injury following vaccination. ⁷ Association of American Physicians and Surgeons (AAPS): Only 10% of serious vaccine adverse events are reported.⁸

4. The Federal Court of Claims lists about 140 attorneys that accept vaccine injury and death cases.⁹ This number has been steadily increasing in recent years.

5. The National Childhood Vaccine Injury Act of 1986 (NCVIA) shields vaccine manufacturers from liability for the death and disability caused by their vaccines. There is no financial incentive for manufacturers to produce safer vaccines.¹⁰

6. 90-95% of 1900's childhood infectious disease mortality decline preceded the vaccines.¹¹ Absence of vaccination will not bring back infectious disease rates of pre-vaccine days.

- The CDC has admitted the contents of vaccines can cause brain damage.

- 75% of the Children in Rochester, NY that contracted Measles WERE VACCINATED. TV news anchor announces over 90 out of 124 cases of measles in NY “epidemic” are vaccinated 75% Failure rate

- Pertussis Vaccine can cause permanent brain damage

Scientists Conclude Pertussis Vaccine Causes Permanent Brain Damage

Published December 27, 2018 | [History](#)

On September 28-October 1, 1989, the National Vaccine Information Center sponsored an international Workshop on the Neurological Complications of Pertussis and the Pertussis Vaccine. The scientists attending the multidisciplinary workshop concluded that both whooping cough and the current whole cell pertussis vaccine can cause permanent brain damage.

During the three-day workshop, the scientists agreed that toxins within the *B. pertussis* bacterium, which cause whooping cough and are in the pertussis vaccine, can...

- Court Hears about Gardasil Science and Moves Forward

https://childrenshealthdefense.org/news/court-hears-gardasil-science-and-moves-forward/?utm_source=mailchimp

On Wednesday January 9th, I attended Science Day Presentations in the Jennifer Robi vs. Merck and Kaiser Permanente case in Los Angeles Superior Court. I want to report to our community on the outcome of this important event and provide some personal commentary.

• Shingles Vaccine Eye Damage

The shingles vaccine Merck Pharmaceuticals has been marketing since 2006 now comes with a warning that it could cause eye damage. February 17, 2016, the FDA approved a label change to Merck's Zostavax vaccine prescribing information. The change to the label added "[Eye Disorders: necrotizing retinitis.](#)" Merck consequently faces [Shingles Vaccine Lawsuits](#) over this dubious vaccine.

Keratitis Vision Damage from Vaccines

WebMD reported that researchers found 20 cases of keratitis in children and adults that occurred within a month of receiving a chickenpox or shingles vaccine. Keratitis symptoms for adults developed within 24 days of vaccination, while symptoms in children began within 14 days of vaccination. Researchers concluded there is a probable relationship between the vaccine and the eye inflammation, though the study wasn't designed to prove the vaccine actually caused the condition. (Of course it wasn't.)

Keratitis causes inflammation and scarring of the eye tissue. If one fails to get treated fast, it can lead to permanent vision loss.

Health Sciences Institute (HSI) points out in a Jan 21, 2016 piece that the researchers say they don't know why the shingles shot may cause keratitis, but we do know that keratitis has been linked to autoimmune disorders, and that shots like the shingles vaccine can profoundly short circuit the immune system.

The mainstream media didn't miss a beat, of course, telling us that despite these little "side effects" (hardly worth a mention, really), it's still a good idea to get the shingles vaccine, and never mind the fact that it barely works at all, or perhaps causes more cases of shingles than it prevents.

Shingles Vaccine causes Shingles

The mainstream fails

to tell us that the [shingles vaccine causes shingles](#). Funny they leave that out, because even the FDA is aware now that the shingles vaccine features an absurd problem. In August 2014, FDA approved a change to the shingles vaccine warnings label to include that the shingles vaccine *causes* – wait for it – shingles! Yes, you read that right.

Shingles Vaccine Fails to Work as Advertised

HSI further points out that "UCLA researchers found that only one in 175 people who get the vaccine will be able to dodge a shingles flare-up. And if you're over 70, you'd be lucky to get those odds."

So these people from WebMD and other mainstream media outlets who take endless money in advertising from Big Pharma and never see a drug or vaccine campaign they don't like, are now telling you it's worth risking eye damage, maybe up to blindness, to take a shingles shot that fails more than 99 percent of the time, and uh, just happens to also give you shingles? That's a chance worth taking? You take it, friend. We shall pass on the shingles vaccine.

More Shingles Vaccine "Side Effects"

The Zostovax label lists the most common side effects as "headache, redness, pain, itching, swelling, hard lump, warmth, or bruising where the shot was given." Other "side effects" include:

- allergic reactions, which may be serious and may include difficulty in breathing or swallowing. (breathing is kind of important, so you may want to read this one.)
- chickenpox
- fever
- hives at the injection site
- joint pain
- muscle pain
- nausea
- rash
- rash at the injection site
- shingles
- swollen glands near the injection site (that may last a few days to a few weeks)
