

Today at 2:00 PM, Connecticut legislators will consider a bill that would add testing requirements to NBS for a genetic disease that finally has an affective treatment.

As the mother of a child born pre-gene isolation, let alone a treatment, I urge you to change the destiny of families that could be affected by SMA by supporting HB 7282.

Please ask your colleagues in Hartford to support the testing requirements. Can you please let us know the outcome of this bill.

Thank You,

Anne Haas
