Dear Public Health Committee,

As a father of a vaccine injured son, I am writing to OPPOSE HB 6540 – AN ACT CONCERNING THE PREVENTION OF HIV. Teaching children about prevention of HIV is important, however allowing a minor child to be treated prophylactically for HIV is alarming.

I do not give the government consent to vaccinate my children. These prophylactic treatments are completely unnecessary and severely dangerous. There are many dangerous side-effects of Truvada (PrEP). Please read just how harmful it is. The benefit does not outweigh the risk, when a child could develop liver disease, kidney disease or die from a vaccine that may or may not help prevent infection.

This bill may also lead to promiscuous sex among minor children, believing that they are protected. Giving them a false sense of security and increasing teen pregnancy.

I also oppose any bill that takes away parental and First Amendment rights and mandates vaccines that can cause harm.

When reviewing information on followthemoney.org it is quite obvious how a bill becomes a law in this country. So, I ask that you vote with your conscience and vote NO to HB6540 or you may be the reason why the next child that gets this vaccine dies or is injured.

A concerned parent,
